### 1 Document aim and conventions

Beside technical data, this document describes product use and function. For possible combinations with other Nanotec products, please ask your Nanotec sales partner. Before using the product, please note document font styles and conventions.

Underlined text marks a cross reference or hyperlink.

Example 1: Observe our safety notes.

Example 2: Download needed code templates from our website for EMEA / APAC or AMERICA.

Gray bold italics call out menu paths, buttons, tab and file names.

Example 1: Select Home > Connect controller > CANopen.

Example 2: In the NanoJ tab, select NanoJ project and open Analog Input.cpp.

*Plain italics* mark *Freehand entries* and *foreign-language* expressions. They also emphasize words of critical weight. Alternatively, bracketed exclaim marks(!) give critical weight.

Example 1: Enter *Plug & Drive Studio*. In addition to users (= *Nutzer; usuario; utente; utilisateur; utente* etc.), this document also addresses:

- Third-party users (= Drittnutzer; tercero usuario; terceiro utente; tiers utilisateur; terzo utente etc.).

- End users (= Endnutzer; usuario final; utente final; utilisateur final; utente finale etc.).

Example 2: Protect yourself, others and your equipment. Follow our *general* safety notes that are generally applicable to *all* Nanotec products. Also follow the *specific* safety notes that apply to *this* specific product.

Courier marks code blocks or programming commands.

Example 1: Via Bash, call sudo make install to copy shared objects; then call ldconfig.

Example 2: Use the following NanoLibAccessor function to change the logging level in NanoLib:

```
//
***** C++ variant *****
void setLoggingLevel(LogLevel level);
```

#### The verb to co-click

Co-clicking means a mouse click by secondary key to open context menus etc.

Example 1: Co-click the file, select Rename, and rename the file.

Example 2: Co-click the file to check and select Properties.

#### **Numerical values**

Numbers appear in decimal. Hexadecimal notation ends in subscript *h*. Objects in the object dictionary notate in hexadecimal as <Index>: <Subindex>, non-notated subindices as  $00_h$ . Example:  $1003_h$ :  $05_h$  is subindex 5 in object  $1003_h$ . And  $6040_h$  is subindex 00 in object  $6040_h$ .

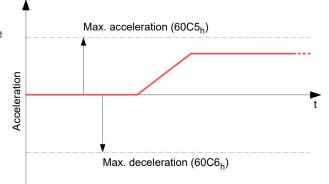

Bits		MSE	3						LSB	
Each object bit counts up from LSB (bit number 0),	Bit Nummer		-							
such as data type UNSIGNED8:	Bits	0	1	0	1	0	1	0	1	$ m \triangleq 55_{hex}  m \triangleq 85_{dec}$

### **Count direction (arrows)**

Illustrations always count arrow-wards; both example objects  ${\tt 60C5}_h$  and  ${\tt 60C6}_h$  are thus positive.

### Versions

Document version	Date	Changes	Product release
1.0.0	12/2021	Edition	1.2.0

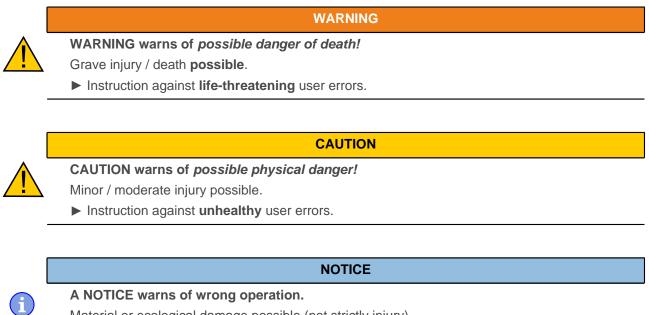

### 2 For your safety

Before product use, please ensure that all users read, understand and follow the instructions in this document fully.

### 2.1 Warn and risk levels

Please note that our hazard warnings, alert symbols and signal words mark different risk levels.

Material or ecological damage possible (not strictly injury).

Instruction against destructive user errors (= mere material risks).

Note: Explains or simplifies a process by additional information.

### 2.2 General safety notes

Protect yourself, others, and your equipment. Observe our **general** warning messages that apply to **all** Nanotec products.

WARNING

Grave injury or death from product misuse!

- ► Handle the product as a qualified expert only.
- ► For due safety, follow valid OEM instructions.

### 2.3 Specific safety notes

For due protection, observe our **specific** warning messages that apply to **this** specific product.

Grave injury or death from product abuse for safety purposes!

- ▶ **Never** integrate / use the product as a safety component.
- ▶ If you install the product: Warn customers expressly by safety note against risks and abuse.
- ▶ Instantly share our safety notes / instructions with your customers.

### 2.4 Additional safety notes

If handling third-party products, observe our additional warning messages and valid OEM instructions.

- WARNING
- Grave injury or death from unfit third-party equipment!
- ► Fulfill the system and hardware requirements.
- ► Use compatible equipment only.
- ► Follow valid OEM instructions.

### 3 Before you start

Before product use, you need to prepare the PC and verify product intent / limits. Via online help, you can learn how to install and set up projects and how PNDS3 runs. A reference chapter explains each object dictionary item for Nanotec controllers. Observe the safety notes in the manual (www.nanotec.de).

### 3.1 System and hardware requirements

### WARNING

Grave injury or death from realtime-*in*capable environment (Windows PC, etc.)!

- ▶ Keep the product away from time-sensitive applications or synchronous multi-axis movement.
- ▶ Never integrate it as a safety component in a product or system.

Plug & Drive Studio 3 (PNDS3) needs 64-bit operating systems and supports all Nanotec products with CANopen, Modbus RTU or USB interface. Nanotec recommends controller firmware *FIR-v2139* or newer. Please find the current version in the **Firmware** folder. PNDS3 offers a special control for <u>firmware update</u>.

## **PNDS3** v1.2.0

i

### 64-bit OS requirements

- Windows 10
- .NET Framework 4.8
- Display resolution 1920x1080

### Fieldbus adapters / cables

- CANopen:
  - □ IXXAT USB-to-CAN V2
  - Nanotec ZK-USB-CAN-1
- Modbus RTU:
  - Nanotec ZK-USB-RS485-1 or equivalent USB-RS485 adapter
  - □ USB cable via virtual comport (VCP)

### 3.2 Intended use and audience

### NOTICE

Damage from unskilled staff!

- ▶ Use the product only for the purpose described in this document.
- Restrict use to expert staff only.
- ► Follow valid OEM and system prescriptions for all equipment involved.

As free software for easy Nanotec drive commissioning, Plug & Drive Studio 3 (PNDS3) supports Nanotec CANopen and USB products. The underlying operating system / hardware (PC) is **not** real-time capable. **Never** use PNDS3 for time-critical or synchronous multi-axis motion **nor** integrate it as a safety component in a product or system.

Add proper warnings and instructions for safe use / operation to each end user product with a Nanotecproduced component. Submit any Nanotec warning directly to end users. The product addresses skilled experts in industry use cases alone. Expert means:

- Training / experience in motor and controller handling
- Understanding this document plus Nanotec drive manuals
- Knowledge of valid regulations

### 3.3 Scope of delivery and warranty

PNDS3 comes as a *\*.zip* folder from our download website for either <u>EMEA / APAC</u> or <u>AMERICA</u>. Duly store and unzip your download before setup. The product package contains:

- Software as an executable file
- Project templates

- Current firmware release
- Online help file

For scope of warranty, please observe our terms and conditions for either <u>EMEA / APAC</u> or <u>AMERICA</u>. **Note:** Nanotec is not liable for wrong quality, handling, installation, operation, use, and maintenance of third-party equipment! Follow valid OEM instructions.

### **4 Your product**

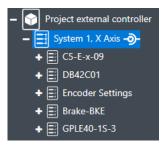

With PNDS3, you parametrize and commission Nanotec drives. Using templates for various Nanotec drives, you can add your own projects, systems and modules to the modular user interface. The software comes with a default folder structure (*Project, System, Module Group, Module,* etc.).

#### Project (default folder Projects)

You manage all settings and device parameters in projects, save these as a file and im- / export them, say, as a template. Such a reusable **Project** can have multiple systems, say, the axes of a machine.

### System (default folder Systems)

In a project (here: external controller), you create and store drive systems (here: X-axis). Each is im- / exportable as template.

You can extend such a reusable **System**, of at least motor and controller, by modules or module groups for encoder, gearbox, brake, settings, parameters, etc.

By parameters, sortable / poolable into several modules or module groups, you quickly control all system elements.

#### Module (default folder Modules / Module Groups)

A module contains parameters or controls (groups) and is im- / exportable, single or grouped, as template.

### Controls Group (default folder Groups)

MOTOR SETTINGS				
Max motor current	0	13890	•	
Max current	0	1000		Ĩ
Motor rated current	0	4630	$\checkmark$	Ĩ
Maximum duration of peak current	0	0	$\checkmark$	Ī
Open loop current reduction value/factor	0	-50	$\checkmark$	Ē
Open loop current reduction idle time	0	1000	$\checkmark$	
Pole pair count	0	4	$\checkmark$	-
Open Loop / ClosedLoop	Open Loop	Closed Loop		[
Motor Type	Schrittmotor	BLDC		6
SurrentReduction	Aus	An		
TUNING PARAMETER				

A **Controls group** pools single device parameters (objects from the dictionary in the controller) and / or **Special controls**.

You im- / export such a control group together with set values, say, as template.

#### **User Level**

Via **User level**, you govern user rights for the following roles:

- Expert: Project owner with all rights. May create and edit projects, rights, visibilities, etc. Governs via Properties, for each single parameter up to a complete Controls group, who may see and edit exactly what.
- **Engineer**: May change device parameters, but can't edit a project.

Mechanic: Similar to Engineer, but often gets fewer editing rights from Expert.

### **Property editing**

Simply co-click an element, select **Properties**, insert a visible name, version number, and description: This way you create your individual user interface.

### 5 Installation and adapter

Install the software, set up the adapter – and PNDS3 is ready to go. You find PNDS3 software online as a zip download.

- 1. Open the website Nanotec > Products > Software > Plug & Drive Studio 3.
- 2. Download and extract the product zip file.
- 3. Run the executable file PNDS3.exe.
- 4. Only with PNDS3 installed: Prepare your fieldbus adapter (see below).

### CANopen

- 1. Decide: Ixxat USB-to-CAN? Or Nanotec ZK-USB-CAN-1?
- 2. For Ixxat USB-to-CAN: Download the driver (<u>www.ixxat.com/</u>); install it by hand.
- 3. Connect the adapter to the computer. For Nanotec ZK-USB-CAN-1: Wait for self-installation.
- 4. Via correct cable (see product manual): Connect the installed adapter to the controller.

### USB: Nanotec Virtual COM-Port (VCP)

- 1. Connect the voltage supply to the controller and switch it on.
- 2. Via correct USB cable: Connect the PC to the controller (= "mass storage device").
- 3. In Explorer > Controller directory: Select cfg.txt (= pd4ccfg.txtfor a PD4C).
- 4. Open the file via text editor (Notepad etc.).
- **5.** Add the lines 2102 | =0x100000 and 4015:01=0. Save the file.
- 6. Restart the controller and check if its COM port appears in the device manager.

### Modbus RTU

- 1. For Nanotec ZK-USB-RS485-1: Connect the adapter to the computer and wait for self-installation.
- 2. For other equivalent adapters: Follow valid OEM instructions to install the driver.

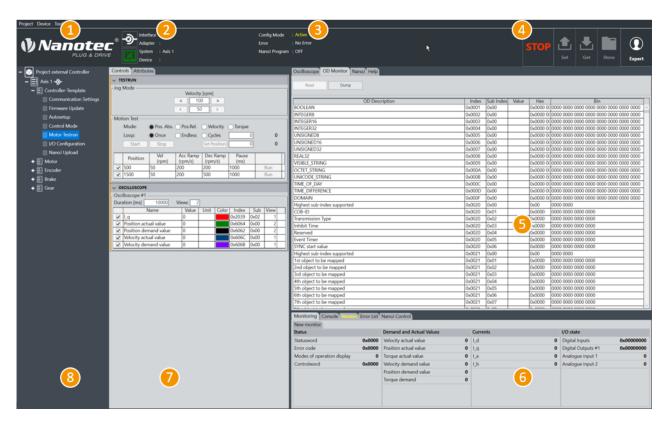

Thanks to flexible areas and windows, fitted into the main window or usable stand-alone, you can master a wide range of tasks. Before product use, please familiarize yourself with the UI structure.

When PNDS3 starts for the first time, the user interface appears rather empty. But that is intentional ...

Contraction (Contraction)			
10 B 10 B 10	The second	TAN NUMBER	
10 M H			
territoria			
	1000		
ten Bira Talan Talan - B			
Annual Mar States Inches Annual

	Ad upped to be regard		
	No. New York of Street and Street	A Dist	A Designer Address

Once you create or load a project, the interface fills up according to your needs. This way, you design your own UI.

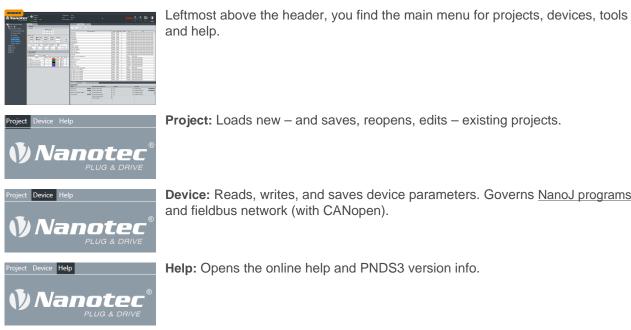

- Header for main menu (1), adapter linkage (2), brief status (3), and operation buttons (4).
- Display wall (5) for oscilloscope, object directory, help etc.
- Status board (6) with tabs for monitors, error lists etc.
- Work desk (7) for user controls etc.
- Project (or side) bar (8) for systems etc.

### 6.1 Header (1-4)

As a prominent layout bracket on top in the user interface, the UI header contains all basic functions and commands relevant to operation.

### Main menu (1)

Project: Loads new - and saves, reopens, edits - existing projects.

Device: Reads, writes, and saves device parameters. Governs NanoJ programs and fieldbus network (with CANopen).

Help: Opens the online help and PNDS3 version info.

#### Linkage buttons (2)

With these buttons / icons in the header's left, you link or unlink current interfaces / adapters / systems / devices.

Connect: Powers / unpowers the connected adapter (cf. Connecting to adapter).

	: CAN_BUS
63.00	

Configuration mode: Toggles as follows:

and device.

 Configuration mode: In this mode you may edit the project, add or delete systems and modules.

Connection information: Displays information on connected adapter, system

Commissioning mode: In this mode you may change parameters and configuration values, but may not edit a project.

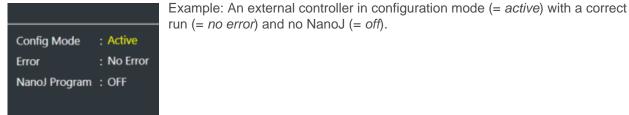

CAN\_BUS IXXAT (HW442556) PD4-CB59M024035-E-08 [ID:

#### Brief status (3)

In mid-header, you can see at a glance if config mode and a NanoJ program are involved and which errors are found.

### **Operation buttons (4)**

Vanote						A 100 (A)
		10000				
	Manager -				The Low L	
		1000		10.0		
				200 50		
		ACCES 1				
	Autor of Autor Scher Face					
		La Contraction				
		NUMBER OF TAXABLE		10.0	Dir. birtin	
	1900-0000 E	811 - 1 - No. 4			20 20 20 20 20 20 20 20 20 20 20 20 20 2	
		the loss of the lo

		The spectrum sea				
		10.000000		-8.8	Lan birtera	
		10000				
			Terest at Adult Max			
		Internet .				

Rightmost in the header, these buttons toggle motor current, operation parameters and controller values.

Set: Transmits the selected parameter values to system-connected controllers.

STOP: Cuts the motor current without(!) safe shutdown.

Note: You can select parameters to be set by ticking them.

MOTOR SETTINGS				
Max motor current	0	13890		2
Max current	0	1000	Ň	
			$\mathbf{\nabla}$	100 100
Motor rated current	0	4630	⊻	2
Maximum duration of peak current	0	0	$\checkmark$	
Open loop current reduction value/factor	0	-50	✓	
Open loop current reduction idle time	0	1000	✓	
Pole pair count	0	4	$\checkmark$	k
Open Loop / ClosedLoop	Open Loop	Closed Loop		1
Motor Type	Schrittmotor	BLDC		K
CurrentReduction	Aus	An		K
> TUNING PARAMETER				
V NEW CONTROLS GROUP				

Get: Reads the values of system-connected controllers.

 $(\mathbf{\Omega})$ 

Store: Stores Set-transmitted values of system-connected controllers.

User level: Grants project rights for either:

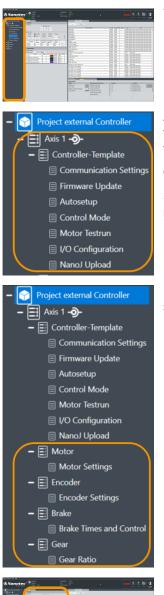

- **Expert**: Project owner with all rights. May create and edit projects, rights, visibilities, etc. Governs via Properties, for each single parameter up to a complete Controls group, who may see and edit exactly what.
- **Engineer**: May change device parameters, can't edit projects.
- Mechanic: Similar to Engineer, often with fewer editing rights.

### 6.2 Project bar (8)

This side bar diplays your loaded project as a tree list by which you create the user interface. Note: Depending on assembly, you can check connections and attributes of all tree list items in the work desk (7).

### Tree list

You find the project bar in the very left of the user screen.

A project (here: for an *external controller*) tree-lists all systems and the items therein (see also <u>Project setup</u>). *One* project and *one* system are minimum; further items are optional and later on define the entire UI layout.

Our example project (= blue) contains the system Axis 1 (= orange).

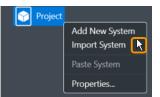

System *Axis 1* contains the module group *Controller template* with individual modules for *communication settings, firmware update, auto-setup,* etc.

Further module groups are, say, *Motor, Encoder, Brake* and *Gear*, with their respective modules for settings, controls and parameters.

) Nanote	e 🏥 🕮 📖 🕮			see 🗄 🖉 🗒 🔮

		ALCON A		
	Labor and parts and in			
		10.00		
	All and a second			
		and free		
			500 50	
		stand in the impact		

For each module, you may add one or more controls groups to the <u>work desk</u> (7) further to the right.

### Project > System

A system represents a motor with controller, that is, one per motor in a multi-axis application.

- 1. To set up a system: Co-click the project.
- 2. In the context menu: Either create a new system via Add new system.
- 3. Or fetch an existing one via Import system.

Properties for: I	New System		$\times$
Key		Value	
System name	Axis 2		
Version	1		
Description			

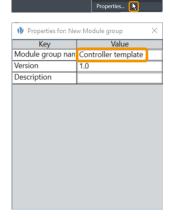

- 4. A new node (= blue) appears in the tree list.
- 5. To name it: Co-click the node, select **Properties**. **Note:** You can edit *any* object via **Properties**.

- 6. In the pop-up: Name the system as needed (here: Axis 2).
- 7. If needed: Versionize and describe the system.
- 8. After last entry: Set a tab stop (so that all is stored).
- 9. Only then: Close the pop-up.
- **10.**Assemble the system with module groups (see below).

#### Project > System > Module group

Remove Modules Group

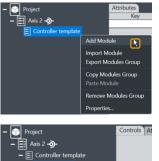

A module group bundles *several* motor functions (= modules). Depending on assembly, you can check its connections and attributes in the <u>work desk</u> (7).

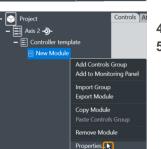

- 1. To set up a module group: Co-click the system (here: Axis 2).
- 2. In the context menu: Either create a new module group via Add module group.
- 3. Or fetch an existing one via Import module group.
- 4. A new node appears in the tree list.
- 5. To name it: Co-click the node, select **Properties**. **Note:** You can edit *any* object via **Properties**.
- 6. In the pop-up: Name the module group as needed (here: Controller template).
- 7. If needed: Versionize and describe the module group.
- **8.** After last entry: Set a tab stop (so that all is stored).
- 9. Only then: Close the pop-up.

10.Assemble the module group with modules (see below).

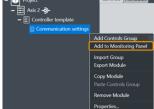

#### Project > System > Module group > Module

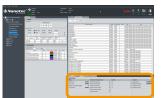

Key	Value
Module name	Communication settings
Version	1.0
Description	
Add to Monitor	

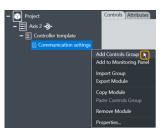

A module allows you to add a *single* motor function (= parameter set etc.). Depending on assembly, you can check its connections and attributes in the <u>work</u>  $\underline{\text{desk}}$  (7).

- 1. To set up a module: Co-click the module group (here: Controller template).
- 2. In the context menu: Either create a new module via Add module.
- **3.** Or fetch an existing one via **Import module**.
- 4. A new node appears in the tree list.
- 5. To name it: Co-click the node, select **Properties**. Note: You can edit *any* object via **Properties**.
- 6. In the pop-up: Name the module as needed (here: Communication settings).
- 7. If needed: Versionize and describe the module.
- 8. After last entry: Set a tab stop (so that all is stored).
- 9. Only then: Close the pop-up.

- **10.**If needed: Add the module to the <u>status board</u> (6) as a monitor, via the context menu **Add to monitoring panel**.
- **11.**The module appears in the status board's **Monitoring** tab. **12.**Assemble the module with controls groups (see below).

#### Project > System > Module group > Module > Controls group

- A controls group bundles individual operating elements or parameter sets.
  - **1.** To set up a controls group: Co-click the module (here: *Communication settings*).
  - 2. In the context menu: Either create a new controls group via Add controls group.
  - 3. Or fetch an existing one via Import group.

				And Design				

**10.**The controls group appears in the work desk.

**11.Note:** To delete a controls group, you must first delete each object therein.

### 6.3 Work desk (7)

At the workdesk, in the user screen's half-left, you edit the properties / contents / controls of your project tree. Depending on assembly, different tabs are above the worktable:

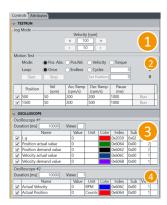

An **Attributes** tab accompanies all items (also module groups); **Bus settings**, by contrast, only the project itself. The **Connection settings** tab, finally, is for systems only; and **Controls** is only for modules. Each tab opens different aspects:

Controls groups Operator clusters

Parameters Operator values

Special controls Feature operators Complex controls Multi-level operators

A workdesk for, say, motor testing could include the controls group *Testrun*, with special controls for *Jog mode* (1) and *Motion test* (2).

Plus: the controls group *Oscilloscope*, with special controls for *Oscilloscope* #1 (3) and *Oscilloscope* #2 (4).

### **Basic principle**

		N ALT TO TALL		

- **1.** Co-klick a controls goup to open its context menu.
- 2. Either select Add parameter to parametrize the group.
- 3. Or select Add special controls to open a Complex controls list.

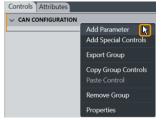

- 4. In the pop-up: Select the needed item by mouse / filter.
- 5. To confirm: Click Add ... / Next (depending on menu).
- 6. If possible: Edit the item. Note: No storage on Cancel.
- 7. Confirm each step with Add ... / Next (final step: Finish).

8. The item appears in the controls group. Parametrize there (if possible).

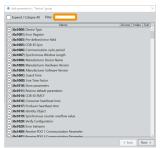

### Controls group > Parameter (example: device ID)

A parameter defines and monitors the system behavior. Depending on assembly, you can check its connections / attributes in the workdesk.

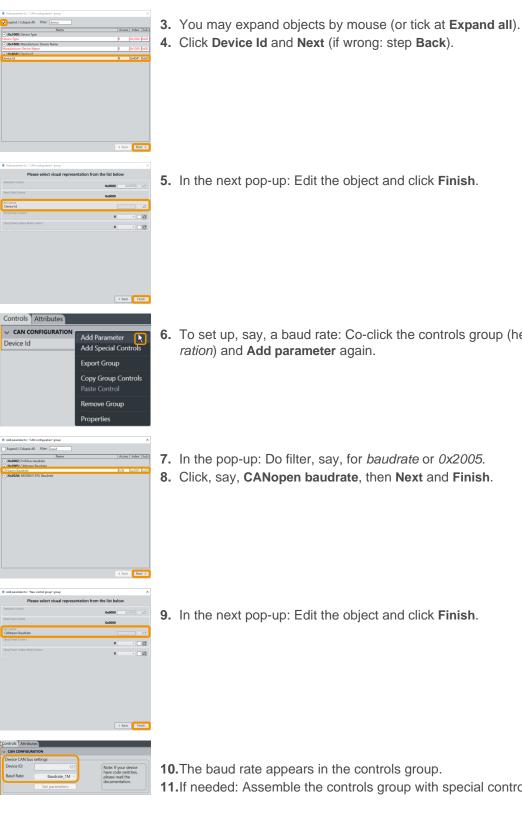

1. To set up, say, a device ID: Co-click the controls group (here: *CAN configuration*) and **Add parameter**.

2. In the pop-up: Enter *device* or *0x4041* to filter for the **Device Id** object.

- 6. To set up, say, a baud rate: Co-click the controls group (here: CAN configuration) and Add parameter again.
- 7. In the pop-up: Do filter, say, for baudrate or 0x2005.
- 8. Click, say, CANopen baudrate, then Next and Finish.

9. In the next pop-up: Edit the object and click Finish.

**10.**The baud rate appears in the controls group. **11.**If needed: Assemble the controls group with special controls (see below).

### Controls group > Special controls (example: oscilloscope)

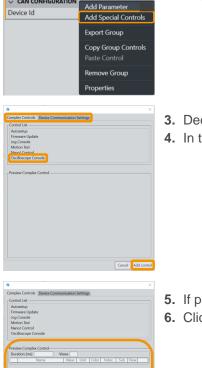

Special controls define and monitor (as macro collections) the system behavior. Depending on assembly, you can check their connections and attributes here in the work desk.

**1.** To set up a special control: Co-click the controls group.

Controls Attribute

- 2. In the context menu: Select Add special controls.
- 3. Decide: Complex controls tab? Or Device communication settings?
- 4. In the tab of choice: Filter / Select the needed item and Add control.

- 5. If possible: Check the manual setting options in Preview complex control.
- 6. Click Add control.

- 7. If possible: Edit the item and click Finish.
- **8.** The special control (here: *Oscilloscope #2*) appears in the controls group.
- 9. For details: See <u>special controls setup</u>.

### 6.4 Display wall (5)

The display wall shows oscilloscope data, current OD values, and the help.

Several tabs facilitate navigation in the display wall, in the user screen's upper right.

Oscilloscope: See Special controls > Oscilloscope console.

OD Description	Index	Subl
Highest sub-index supported	0x6078	0x00
Min position range limit	0x6078	0x01
Max position range limit	0x6078	0x02

**OD monitor:** Lists all objects from the controller's dictionary, together with their current values. For updates: Click **Read**.

To save the list as a text file on the hard drive: Click **Dump**. Keep the text file with current values ready in case of support enquiries.

Help: Displays the description of the currently chosen element (OD object).

### 6.5 Status board (6)

I<sup>2</sup>t kann nur f
ür den Closed Loop-Betrieb verwendet werden, mit einer Aus den kleineren der Werte von <u>2038</u>,:01<sub>h</sub>, <u>6073</u>, und <u>2031</u>, begrenzt.

Objektbeschreibung

Here, at the bottom right of the user screen, you track your system by monitors, error lists, NanoJ, etc.

Nanotec							9
	125 8 9 9 9						
	- Minutesh						
Reducted (1) Real							
	100 100 100 100 100 100 100 100 100 100		and the second second				
					- 25 - 5		
		- /	Contraction (Contraction)				_

The status board is in the bottom right of the user screen. It has tabs for **Mon-***itoring, Console, Version, Error list*, and **NanoJ control**.

### Monitoring > Setting up a monitor (example: Test)

Monitoring Concellent Defau Status Import Module	Error List	NanoJ Control
Statusword	0x0000	Velocity actual
Error code	0x0000	Position actual
Modes of operation display	0	Torque actual
Controlword	0x0000	Velocity dema

In the **Monitoring** tab, you combine either single or grouped monitors to track individual system behavior in real time.

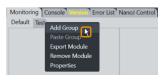

- 1. To set up a monitor: Co-click the tab Monitoring.
- 2. In the context menu: Either create a new monitor via Add Monitor module.
- 3. Or fetch an existent one via Import module.

Default	New mo	Paste Group Export Module
		Remove Module Properties

Key	Value

Version	1
Description	

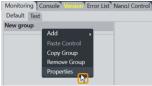

- 4. Co-click the new monitor tab and **Properties**. **Note:** You can edit *any* object via **Properties**.
- 5. In the pop-up: Name the new monitor as needed (here: Test).
- 6. If needed: Versionize and describe the monitor.
- 7. After last entry: Set a tab stop (so that all is stored).
- 8. Only then: Close the pop-up.

### Monitoring > Setting up a group (example: *Statusword*)

1. Co-click the monitor of choice and Add group.

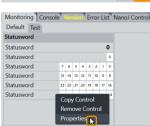

Module name Statusword Version 1 Description	tatusword	
Description		

- 2. Co-click New group > Properties. Note: You can edit *any* object via Properties.
- 3. In the pop-up: Name the new group as needed (here: Statusword).
- 4. If needed: Versionize and describe the group.
- 5. After last entry: Set a tab stop (so that all is stored).
- 6. Only then: Close the pop-up.

#### Monitoring > Setting up parameters (example: Statusword object format)

- 1. Co-click the group of choice and Add > Parameter.
- 2. By filter entry: Find the object of choice (here 0x6041 Statusword).
- **3.** If needed: Select a sub-object (here: *Statusword*).
- 4. Click Next.
- 5. For (visual) object format: Select either Standard 0x0000.
  - Or Single 1-LED.
  - Or 8-LED row.
- 6. Click Finish.
- 7. Add all object formats of choice.

- 8. For 16 (or even 32) bits, you may combine several 8-LED rows.
- 9. By default, each LED row shows bit 0 to 7.
- **10.**To show, say, bit **24** to **31**: Co-click the LED row and **Properties**. **Note:** You can edit *any* object via **Properties**.

🌒 Properties for: Sta	atusword X
Key	Value
Description	Bit 24 to 31
Data entry name	Statusword
Index	0x6041
Sub index	0x00
Help index	od_6041_00
Stop auto refresh	
Visibility	Mechanic ~
Mask	0xFF
Bit shift	24

11.In the pop-up: Change the bit shift, say, to 24.12.Set a tab stop (so that all is stored).

**13.** If useful: Add a description, say, *Statusbits 24 - 31*.

Monitoring Cons	ole	/er	sie		Er	ror	Lis	st	Nar
Default Test									
Statusword									
Standard								0	
1 single LED								0	
Bit 0 to 7	7	6	5	4	3	2	1	0	
Bit 8 to 15	15	14	13	12	11	10	9	8	
Bit 16 to 23	23	22	21	20	19	18	17	16	
Bit 24 to 31	31	30	29	28	27	26	25	24	

- **14.**Change the bit shift for each 8-bit row needed.
- **15.**Set a tab stop after each entry (so that all is stored).

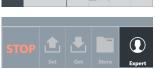

### 7 Project setup

Only in a project, you go first software steps and manage your devices, settings, connections, etc. Note: Ex works, in the software's Projects folder, there is a sample project each for motor-external and for NanoJintegrated controllers. Nanotec recommends using these templates.

### Grant expert rights

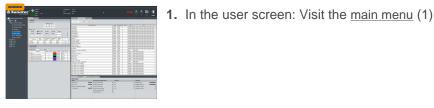

- 1. Connect the power supply and the cables to the controller.
- 2. In the user screen: Visit the operation buttons (4).

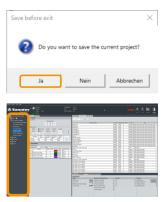

3. Via Button: Select User > Expert.

### Load / Create a project

- 2. Preferably use Project > Open to select an existent sample project for template.
- 3. Or, for a new one instead: Select Project > New.

- 4. If a pop-up wants to store the current project: Click Yes.
  - No will close the project unstored and without backup.
  - Cancel will just close the pop-up.
- 5. The newly loaded selection appears in the project bar (8)

### If needed: Name the project

1. Visit the project bar (8).

### 7 Project setup

Proje	ct
	Add New System Import System
	Paste System
	Properties

Project name Version	Project Ixxat
	1
	11
Description	
User level	Expert
Creation date	19.02.2021
	19.02.2021

- 2. Co-click the current project and Properties.
- **3.** In the pop-up: Name, versionize, and describe the project (here: *Project lxxat*). **Note** the pull-down for granted user rights (here: *Expert*).
- 4. After last entry: Set a tab stop (so that all is stored).
- 5. Only then: Close the pop-up.

1. Visit the project bar (8).

### Load / Create a system

- Project Add New System Import System Paste System Properties...
- 1. In the project: Preferably use **Import System** to select an existent sample system for template.
- 2. Or, for a new one instead: Select Add new system.

Description PD4-C	

- **3.** In the pop-up: Name, versionize, describe the system as needed (here: *X Axis*, version *V1*, for *PD4-C*).
- 4. After last entry: Set a tab stop (so that all is stored).
- **5.** Only then: Close the pop-up.
- 6. Repeat for each additional system.

### Connect to adapter

1. In the project bar (8): Open your project.

### 7 Project setup

USB (Modbus VCP

Bus Type

- 2. In the work desk (7): Open the Bus settings tab.
- 3. In the Bus settings tab: Select the Bus type.
- 4. Check setup by Scan adapters. If no result: <u>Set up an adapter</u> and check again.
- 5. Select the needed adapter.

1. Visit the work desk (7).

6. You can link / unlink the adapter via Connect icon (here: green).

()) Nanote

- 2. In the **Bus settings** tab: With the <u>adapter linked</u>, you can see all connected devices.
- 3. Click Scan devices. Check Connected device.
- 4. By Pulldown: Select a system to link your device to.
- 5. You can link / unlink the system via Connect icon (here: green).
- 6. If linked, you reach the device parameters.

### Select the OD file

Error L

Incorrect OD

Monitoring Console

OD File

Version: 1.0.0

oring Console Version Error List

PNDS3 shows objects that match the controller firmware with correct OD file only (object dictionary). If the system is linked, a **Version** tab shows if the correct OD file is loaded. Otherwise, the generic file *Common OD* loads, by which you reach available objects of all Nanotec products.

- 1. Visit the status board (6).
- 2. Open the Version tab.
- Common OD: Reloadable via Remove OD file
- OD file of choice: Loadable via Change OD file
- Firmware-correct OD files for all Nanotec controllers: In PNDS3's Firmware folder

Wrong OD files report an error (= red).

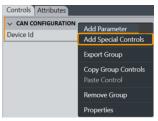

### 8 Special controls setups

Via **Special controls**, you add **Complex controls** and **Device communication settings** to the user interface. Both help you to use advanced controller functions.

#### **Basic principle**

Special controls define and monitor (as macro collections) the system behavior. Depending on assembly, you can check their connections and attributes here in the work desk.

- 1. To set up complex controls or device communication: Co-click the controls group.
- 2. In the context menu: Select Add special controls.

- 3. Complex controls? Device communication settings? Open the tab of choice.
- 4. Select the needed item and Add ... / Next (depending on menu).

Control List CAN Settings Modbus RTU Settings Modbus TCP Settings	
Modbus RTU Settings	
Preview Complex Control	(a
Baud Rate: Set parameter	Note: If your device have code switches, please read the documentation.

- 5. If possible: Check the manual setting options in Preview complex control.
- 6. If possible: Edit the item. Note: No storage on Cancel.
- 7. Confirm each step with Add ... / Next (if wrong: step Back).
- 8. Approve with Finish.

 $\rightarrow$  The control / setting of choice appears in the work desk.

### 8.1 Complex controls

- Injury from erratic motor movement after auto-setup (= parameter loss)!
- ► For motors with integrated controllers: Avoid auto-setup (since it comes factory-run already).

CAUTION

▶ Otherwise: Restart the motor after auto-setup (homing alone won't suffice).

#### NOTICE

#### Motor malfunction from auto-setup user error!

- ▶ Close possible NanoJ programs (object 2300<sub>h</sub>:00<sub>h</sub> Bit 0 = "0"; cf. 2300h NanoJ Control).
- ▶ Keep the motor load-free, and freely rotable in any direction.
- **Don't** touch the motor.

With the **Complex controls** macro collection, you create your own controller functions. Next to **Autosetup** and **Firmware update**, these include **Jog console**, **Motion test**, **NanoJ control** and **Oscilloscope console**, etc.

#### Autosetup

You need Autosetup to parametrize the motor and connected sensors (encoder / Hall sensors).

00	Autosetup

#### As long as the motor on the controller or the feedback sensors (encoder / Hall) remain the same: Run **Autosetup** only once, on initial commissioning.

#### **Firmware update**

Nanotec recommends controller firmware *FIR-v2139* or newer. Please find the current version in the **Firmware** folder. You start **Firmware update** in the <u>work desk</u> (7):

ile Name:	PD4-Cx-E-08-FIR-v2039-B807052.fw
File Firmware Version:	FIR-v2039-B807052
Product Codes:	4; 5; 6; 24; 40; 44; 185; 186; 187; 188; 189
Product Code:	6
Load From File	Remove From Project Update Device
Firmware verified for t	this device

## 1. In the control group of choice: Open the **Controls** tab and search for **Firmware update**.

- 2. There: Click Load from file.
- 3. Select a firmware file and click Open.
- 4. PNDS3 checks via product code if the chosen file fits to the product.
- 5. Click Update device.
- 6. Firmware updates itself.

**Note:** The chosen firmware file will be stored as part of the project the next time the latter is stored. If you don't want this to happen, click **Remove from project** before.

#### Jog console

Jog Mode ——		
-	Velocity [rpm]	
	<b>«</b> 200 <b>»</b>	
	< 50 >	

Via **Jog console**, you test the motor in velocity mode. You can select two target speeds. The motor runs as long as you use the mouse to press the button for left / right rotation.

#### Motion test

- Moving Test									
Loop: Once		ice (	Endless Ocycles		0		0		
Mod	le: 💽 Po	s. Absolute 🤇	Pos.Relative	e 🕜 Velocit	у				
Start Stop				Set Pos	ition	0	9667		
	Position	Vel	Acc Ramp	Dec Ramp	Pause				
	Position	(rpm)	(rpm/s)	(rpm/s)	(ms)				
~	500	50	200	200	1000	Run			
<u> </u>				500	1000	Run			

In **Motion test**, you check the motor in position / velocity / torque mode. Your options include target values, acceleration / deceleration ramps, repetition cycles, test run duration etc.

### NanoJ control > Controls

Controls Attributes						
V NEW CONTROL GROUP						
Nano J						
Project NanoJ Test Velocity	Vers. 1.0.1 Publish Valid					
Save	Build					
Device	Status					
Program Run	Stop Remove					

In **NanoJ control > Controls**, you create a NanoJ new project (= **New**); you name / version it by hand entry and save it by **Save**. The button **Build** compiles the project.

By **Import**, you import existing NanoJ projects of choice).

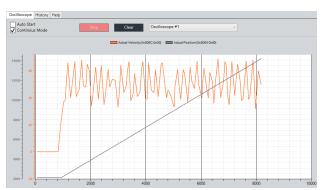

You can export the complete module. If you have selected **Publish**, the project is exported without the souce code.

**Note:** The next time you store the project, the selected NanoJ file merges into the project. If you don't wish this to happen, click **Remove** before. You can change the active NanoJ program on the controller via **Program** and control it via **Run** or **Stop**.

### Oscilloscope console

Oscil	oscope #1							1
0000		Duration [ms] 100			000 Number Of Views			
	DI	Iration [r	nsj	100	000 Numa	ber Of v	rews	
	Name	Value	Unit	Color	Index	Sub	View	
✓	Actual Velocity	47	RPM		0x606C	0x00	1	
-	Actual Position	9272	Counts		0x6064	0x00	1	ſ

Oscilloscope #1									
		Duration [r	iration [ms] 10000 Number Of Views						
Name		Value	Unit	Color	Index	Sub	View		
-	Actual Velocity	0	RPM		0x606C	0x00	1		
✓	Actual Position	9667	Add Oscilloscope Data Entry				1		
			Delete O	scillosc	ope Data	Entry			

Via **Oscilloscope**, you monitor and control in real time the current value of device parameters from the object dictionary, say, for recording.

- Duration of recording
- Number of oscilloscope windows

You co-click the data table in the console and select **Add oscilloscope data entry**. From the list, you click an entry type and **Select**. Repeat for each entry type of choice.

For recording, you open the **Oscilloscope** tab in the <u>display wall</u> (5).

Click Start and select one option:

- Auto Start: Recording starts as soon as a parameter of choice changes its value. You start, say, a <u>Motion test</u> and check the speed / position curve in the oscilloscope.
- Continuous Mode: Recording starts as soon as you click Start.

### 8.2 Device communication

With these controls, you parametrize the device communication. **Note:** Coding switches for setting the communication parameters overwrite the software settings on some devices. For details: Follow valid OEM instructions.
